

**REMARKS**

The present amendment corrects language in certain dependent claims that might lend confusion as to the proper dependency intended. No new matter is presented.

In the Restriction Requirement dated March 21, 2008 the examiner cited Chan et al. WO91/11104 for a disclosure of milling acephate. Applicant notes, however, that the milling process referred to was in the context of specifying dimensions for **other insecticides** that could be mixed with the ORTHENE (acephate) insecticide. The full sentence reads:

Most of these insecticides are solids, thus to prepare a pellet with ORTHENE® **they** are preferably milled, if necessary, to fine particle grain size (1-8 microns average diameter), and mixed with a solid dispersant, wetting agent, and/or solid surfactant.

The disclosure on page 11 at lines 13-14 teaches that "The dry ingredients should be ground or provided in a powdered form." There is no disclosure, other than grinding, of how powdered ORTHENE tech is made or what might be its particle size distribution or dimensions.

For the Applicants,
